Re: Lewis Creek Water Well Results

Dear Mr. Williams,

Please find enclosed a copy of the laboratory reports for the two (2) water samples collected from the water wells at the former Lewis Creek Gas Plant site. The sample collected on April 19, 2007 was from the domestic well at the site. The sample collected on May 15, 2007 was from the non-potable well at the site.

The samples were collected to screen for possible impacts to groundwater that may have originated from the historic gas plant. Based on the results, there are no apparent impacts to groundwater from the former gas plant.

Also enclosed is an informational brochure that includes a section on water quality standards and interpretation for your use. The brochure was published for water wells in southwest Colorado, but provides good general information regardless of location.

The Colorado Oil & Gas Conservation Commission would like to thank you for your help and cooperation with the Lewis Creek Gas Plant reclamation project.

If you have any questions, please call me at 303-637-7178.

Sincerely,

John Axelson
Environmental Protection Specialist
Northeast Region
