COMMENTS:

Add one (1) water tank, one (1) separator, one (1) gas or diesel motor, four (4) oil tanks, and one (1) PDC skid to location. Therefore, the new totals are two (2) water tanks, two (2) separators, one (1) gas or diesel motor, six (6) oil tanks, and one (1) PDC skid.

One flowline is installed from the wellhead to the separator carrying multiphase flow. During production, the flow is from the wellhead to the production facility. This buried flowline is a 3 inch schedule 40 steel pipeline and approximately 200 feet in length.

Two (2) lines begin from the separator. The first line from the separator is a gas line and the second line is a liquid line connected to a treater. The treater then has three (3) lines originating from it: one line to the flare/combustor; one line to the oil production tanks; and one line to the water tanks.

The modification of this existing oil & gas location was within the originally disturbed area, and there was not additional surface disturbance. In addition, the modification did not change the cultural distances included on the original Form 2A.
