I hereby attest that I am a Licensed Professional Engineer in the State of Colorado. I attest that I am familiar with the production equipment and secondary containment structures located at WPX Energy's Smith Gulch 31-32-796 Pitsite identified on this drawing. I also attest that this site is included in WPX Energy's Piceance Basin Integrated Spill Prevention, Control and Countermeasures Plan, updated January 2016, and that this facility is in compliance with the provisions of 40 CFR 112.  
David J. Fox, P.E. #25420  
June 28, 2016

Note: Some measurements on drawing are estimates and not field verified.

**SPCC Facility Specific Details**

<b>Field:</b>	South Grand Valley		<b>NDIC #:</b>		<b>PCA#:</b>		
<b>Facility ID #:</b>	16202		<b>Location Name:</b>		SG Completions Pit		
<b>Facility Description:</b> On-shore production related facility natural gas well pad with associated oil and produced water assets. <b>First Production Date:</b> <input type="text"/>							
<b>Facility Location:</b>	<b>State:</b>	CO	<b>Qtr:</b>		<b>Section:</b>		
	<b>County:</b>	Garfield	<b>Township:</b>		<b>Range:</b>		
	<b>Latitude:</b>	39.398235	degrees	<b>Longitude:</b>	-108.12882	degrees	
<b>Potential Oil Volume Capacity:</b>	815	barrels	34230	gallons			
<b>Substantial Harm Determination:</b>	This Facility does not meet the substantial harm criteria specified in 40 CFR Part 112.20.						
<b>Well Pad Assets:</b>	<b>Production Equipment:</b> Please refer to site diagram.						
<b>Distance to Nearest Surface Water:</b>	Please refer to site diagram						
<b>Direction to Nearest Surface Water:</b>	Please refer to site diagram						
<b>Description of Area Topography:</b>	Please refer to site diagram						
<b>Description of Off-Site Drainage:</b>	Please refer to site diagram						

Facility ID:	16202	Facility Name:	SG Completions Pit
Field:	South Grand Valley		
NDIC #:		PCA #:	

<b>Total Storage</b>	815
----------------------	-----

**Conversions:** One barrel = 42 gallons = 5.6 ft.<sup>3</sup>

Facility ID: 16202

Secondary Containment Calculations											
Secondary Containment Area ID	Containment Type	Irregular Containment?	Bottom Length ft.	Bottom Width ft.	Top Length (for earthen) ft.	Top Width (for earthen) ft.	Berm Height ft.	Radius (for oval) ft.	Diameter (for round) ft.	Circum. (for round) ft.	Total Gross Secondary Containment Volume <sup>(1)</sup> ft. <sup>3</sup>
SC-1	Rectangular	No	50	30			3				4500.0

Secondary Containment Displacement From Other Tanks and Precipitation										Required Volumes	
Secondary Containment Area ID	Total Number of Tanks	Tank Contents	Number of Equalized Tanks	Tank Volume Displacement ft. <sup>3</sup>	Other Equip. Volume Displacement ft. <sup>3</sup>	Precipitation Volume Displacement <sup>(2)</sup> ft. <sup>3</sup>	Total Volume Displacement ft. <sup>3</sup>	Net Secondary Containment Volume bbls	Net Secondary Containment Volume ft. <sup>3</sup>	Largest (Equalized) Tank(s) Volume bbls	Largest (Equalized) Tank(s) Volume ft. <sup>3</sup>
SC-1	2	Oil/Cond/PW	--	339.3	0.0	0.0	339.3	741.7	4160.7	500.0	2805.0

<sup>(1)</sup>**Secondary Containment Notes:**  
Secondary Containment volume calculations for earthen berms: V = (Bottom Length x Bottom Width x Height) + (Top Width - Bottom Width)/2 x Height x 0.5 x 2 x (Bottom Length + Top Width)  
Secondary Containment volume calculations for rectangular metal berms: V = Length x Width x Height  
Secondary Containment volume calculations for circular metal berms: V = (Diameter/2)<sup>2</sup> x 3.1415 x Height or V = (Circumference/2x3.1415)<sup>2</sup> x 3.1415 x Height  
Secondary Containment volume calculations for oval metal berms where Width = 2 x Radius: V = ((Length x Width) + (Radius<sup>2</sup> x 3.1415)) x Height  
Secondary Containment volume calculations for oval metal berms where Width > 2 x Radius: V = ((Length x Width) + (Radius x Width)) x Height

<sup>(2)</sup>**Precipitation Notes:**  
Using NOAA 25-yr 24-hr event (inches) = 2.1  
Precipitation volume calculations for earthen berms: PV = Top Width x (Top Width - Bottom Width + Bottom Length) x 2.1/12  
Precipitation volume calculations for rectangular metal berms: PV = Length x Width x 2.1 / 12  
Precipitation volume calculations for circular metal berms: PV = (Diameter/2)<sup>2</sup> x 3.1415 x 2.1 / 12 or V = (Circumference/2x3.1415)<sup>2</sup> x 3.1415 x 2.1 / 12  
Precipitation volume calculations for oval metal berms where Width = 2 x Radius: PV = ((Length x Width) + (Radius<sup>2</sup> x 3.1415)) x 2.1 / 12  
Precipitation volume calculations for oval metal berms where Width > 2 x Radius: PV = ((Length x Width) + (Radius x Width)) x 2.1 / 12

<sup>(3)</sup>**Largest Likely Discharge (for flowlines):** Based on maximum expected average daily oil and produced water through-put taken from WPX Energy 30-day Production Reports

**Conversions:** One barrel = 42 gallons = 5.615 ft.3
