General Comment:

COGCC Engineering Integrity Inspection performed on January 18th, 2017 in response to initial form 19 spill report Doc #401184573 received on 1/13/2017 that outlines: A reportable release was found within secondary containment on the Hankins 34, 44-17U due to a leaking oil tank. Once discovered, the flowline was shut and tank bottomed out. Current recovery efforts are mitigating impacts. The details of observations made during this field inspection are available in the tanks/ berms and flowline sections of this report. No PDC Energy or contract personnel were on site at the time of this field inspection. Photo's have been uploaded and can be accessed via link(s) at the end of this report.

COGCC Rules(check all that apply)

☐ 1101. Installation and Reclamation ☐ 1102. Operations, Maintenance, and Repair ☐ 1103. Abandonment

Comment: Repair/ replacement work has been completed on the crude oil dump line. The dump line entering the oil tank (bottom) has new ball valves and pipe fittings. Note: Maintain records of flowline repairs/ replacements completed. Conduct flowline pressure testing (confirm integrity of flowline repairs/ replacements completed and retain testing data/ chart) prior to returning flowlines to service.
