General Comment:

Environmental Inspection conducted on 03/13/2017 in response to a spill reported four days earlier (see Spill/release Point ID #449635). The day was warm and sunny and practically all snow had already melted. On site with Scott Ghan, Vanguard Environmental Manager. An unknown volume of produced water was spilled from a weld, near a load out valve, on a produced water tank located inside a lined secondary containment. According to Vanguard personnel there was snow melting within and outside of the secondary containment, making it difficult to determine if the liner was compromised. Vanguard suspects of two locations on the perimeter of the secondary containment where produced water may have spilled outside of the containment and flowed toward the west side of the pad. Water was removed with a Vac truck.

During our inspection, no water was observed. No hydrocarbon odor either. Environmental contractor LTE was on site taking soil samples as directed by the operator. COGCC and Vanguard discussed the path forward for investigation and remediation. Vanguard plan was to bring a crane and lift the tank that leaked to inspect and repair or replace. Meanwhile gravel from within the containment will be removed to inspect the liner and determine if it was compromised. Samples will be sent to the lab to determine the extent of the impact. Remediation efforts will be presented to the COGCC via supplemental e-form 19 (or Form 27, as appropriate) when the site investigation is completed.

Environmental**Spills/Releases:**

Type of Spill: PRODUCED WATER

Estimated Spill Volume: _____

Comment: Vanguard planned to remove the tank, remove the gravel within the secondary containment, inspect the liner, sample soil outside the containment to determine the extent of the spill and remediate according to the findings.

Corrective Action: Present via supplemental e-form 19 the results of the site investigation (extent of the impact, lab results and conditions of the liner). Depending on the extent of the impact and difficulties to remediate, either submit the results of the cleanup via supplemental e-form 19 or submit a Remediation Work Plan Form 27.
