**General Comment:**

Environmental Inspection conducted on 03/16/2017. Temperature was approximately 55 degrees F, sunny and dry. Snow cover was not present and the ground was dry... On Site with Lindsey Rider and Brett Middleton from Encana/Hunter Ridge. Additionally, from Encana/Hunter Ridge were Paul Buck (Supervisor H&S and Environment/ Western Operation Manager); Kurt Kissner (Operations Lead); Chad Tomkins (Lead Lease Operator); and Lanny (Automation/Electrician). The objective of the site visit was to observe the recently installed "Water Collection/Disposal and Condensate Recovery System" which was operational at the time. The system consists of the following components (from Work Plan submitted in February 2017 - Doc #401221358):

- Conveyance of water and condensate collected near the spring via gravity feed in the existing 12-inch diameter poly pipe to a recently constructed sump immediately south of the Road Crossing (Vault);
- Pumping water and condensate from the sump to the A27 CDP via buried 6" Flex Steel pipe;
- Separation of condensate from the water using an oil-water separator at the A27 CDP; and
- Pumping the remaining water to a Underground Injection Control permitted well pad for deep well disposal.

The gun barrel and aeration tank from the original system was left in place as a backup system. The new system has double and triple backup safety features; three gradual flow pumps and a condensate trap. A retention/sediment pond was constructed up gradient to capture stream flow generated between the springs and the Water Collection System. A high level alarm system active 24/7 is connected to the signet system that goes to a Command Center in the Parachute Office.
