

Photo 1: View of the project area from the well pad entrance facing center.

Photo 2: View of the eastern portion of the project area from the northeastern corner facing southward. Revegetation is largely comprised of grazed grasses such as smooth brome (*Bromus inermis*) and western wheatgrass (*Pascopyrum smithii*).

Photo 3: View of the northern portion of the project area from the northeastern corner facing westward.

Photo 4: View of the western portion of the project area from the northwestern corner facing southward.

Photo 5: View of erosional rilling within the western portion of the project area.

Photo 6: View of erosional channel approximately 1 foot wide and deep in the southwestern corner of the project area.

Photo 7: View of knapweed rosettes (likely *Acroptilon repens*) in the northeastern portion of the project area.

Photo 8: View of reference area assessed during inspection. Dominant and common species include:

- Pinion pine (*Pinus edulis*)
- One seed juniper (*Juniperus monosperma*)
- Big sagebrush (*Artemisia tridentata*)
- Gambel's oak (*Quercus gambelii*)
- Snakeweed (*Gutierrezia sarothrae*)
- Squaw apple (*Peraphyllum ramosissimum*)
- Banana yucca (*Yucca baccata*)
- Prickly pear (*Opuntia polyacantha*)
- Blue grama (*Bouteloua gracilis*)
- Squirreltail (*Elymus elymoides*)
- Perky Sue (*Tetrandeum ivesiana*)
