

On May 10, 2017 COGCC Environmental Staff (Alex Fischer and Kris Neidel) conducted an environmental field inspection of Think Oil Inc Vaughn #1 Location ID: 391537, API 081-05332.. Weather was overcast and light rain and temperature app 50s degree F. The well has been P and A. was not producing at time of inspection. *For the most recent Field inspection report of this facility, please refer to document # 670201404.*

The following is a summary:

- There are two spoil piles (approximately 8'x 6' x 4') of alleged E&P impacted waste.
- There is an approximate 48-inch by 24-inch container of oil soaked absorbent pads and E&P impacted soil.
- An approximate 20' long by 4' wide by 2' deep depression where fresh water as allegedly disposed of.
- Open excavation (10-diameter by 4 feet in depth) around the P&Aed Vaughn #1, API 081-05332 well.

Corrective Actions:

Remove and properly dispose of the two spoil piles, container of oily material, impacted material around the well head, and surficial soil in the depression.

Finalize the abandonment of the Vaughn #1 well.
