General Comment:

Date of Inspection: 05-26-16

Type of Inspection: Construction, Containment, Stormwater

Location Name: Lamke 33-5-29 1 Pad;

Location ID #: 443885

Construction stormwater BMPs for well pad (perimeter berm, diversion trenches, silt fences, straw wattles, rock check dams, and other spill stormwater control equipment) and access road (borrow ditch with rock check dams for sediment control) are in-place and these stormwater controls indicate no offsite migration of fluids or sediment.

Existing stormwater controls indicate no offsite migration of fluids or sediment to nearby Piedra River, nor the irrigation ditch south of the well pad.

Rock-filled sediment collection basins in-place and operable.

Overhead power lines had been lowered during drilling.
