COMMENTS:

Ward Petroleum requests to temporarily flare this well until October 1st to remove flowback fluid off of the formation and prevent possible well damage. Ward will utilize an enclosed combustor rated for 5 MMCFD to combust the gas and prevent venting. Ward will also ensure a green completion and flowback is utilized. Production equipment that is onsite will be used as it is ready to eliminate any other possible emission sources and waste. An H2S sample will be taken to ensure there is no H2S associated with the gas, that analysis will be submitted on another sundry. Currently pipeline is onsite and is ready to take gas flow, but the gas plant is not in operation. The gas plant is planned to come online in mid to late September if all goes well. If the plant is ready to process gas sooner, flaring will end onsite. Ward will make every attempt to sell gas as soon as possible.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
