451743	SPILL OR RELEASE	AC	08/17/2017		-	SPILL/RELEASE POINT	EI

General Comment:

As part of regular inspections, COGCC staff, Kris Neidel inspected the Margaret Spaulding #11 on at 8:50am, 8/10/2017. Immediately upon arrival it was observed that the well was releasing fluid (water) to the surface. to witness MIT. At the time of inspection the weather was 70 deg and sunny. A valve on the one inch line, on tee below the stuffing box was open, allowing the release, once the valve was closed the release stopped. A blind bull plug assembly was salvaged from spare parts in the field to prevent this same release from reoccurring. Time of release is unknown, total volume of fluid released is unknown. Water was pooling on the east side of the pad, Staff walked around the location to determine full extent of impact. No fluid could be detected off of the pad. Per COGCC rule, the spill was reported to the surface owner and spill was reported on eForm, document number 401376150. Soil samples will be collected to determine the magnitude of any remaining impact. Photos attached.

LocationOverall Good: ☐
