Document 2495981

Remedial action plan:

The Solar SVE system was installed on 7/23/17. The system will run at sporadically throughout the day during sunlight hours and will continue for 2 years at which a follow-up round of soil sampling will occur in close proximity to the 3 wells where SVE has been operating. An additional soil samples will be collected at PITW01 and PITW02 to identify effectiveness of the SVE system on a bio-vent well not connected to the SVE but in close proximity. Additional technologies could include air injection, microbe injection, and or supplemental nutrient injection. Additional future activity could occur if deemed effective through the submittal of a supplemental for 27. The estimated timeframe of remediation will be difficult to determine until the system has been running for 2 years and a healthy population of bacteria has established. We would also like to propose the submittal of a half year report then annually after that. due to the limited data set in a three month period.

I attempted to upload the sample map which was previously submitted and it failed to upload I am attaching it again for you review.

When attempting to submit I am getting and error that "Login user doesn't have permission to submit the form err:Invalid User Token" see attached

Regards,

Brett Middleton
