<p>Comment: The eastern and northeastern cut-slope is not properly stabilized and erosion is occurring. This is evidenced by exposed and overhanging roots at the top of the slope, erosional rilling within the slope, and sediment deposition at the toe of the slope. Sedimentation is also occurring along the western edge of the access road.</p>						Date: <u>11/30/2017</u>
<p>Corrective Action: Install stormwater run-on controls and slope stabilization measures to stabilize the eastern and northeastern cut-slopes. Additionally, stormwater controls need to be installed where erosion is occurring along the access road.</p>
