As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A valve was found open sending water to the pit. The valve was shut and water trucks were dispatched to lower water level in the pit. It is estimated that 20bbls of produced water were spilled, most of the water stayed on location but a few bbls ran off the north side of the location. it ran down hill about 150'. No state waters were involved. The water from this well normally goes to surface discharge at the Milano 116A outfall.
