1120 Lincoln Street, Suite 801
Denver, Colorado 80203

Subject: Third Quarter Groundwater Monitoring Summary, Smith/Ginther 1 & 2 Tank Battery (Facility # 118915) Holly Hills Subdivision, 144th Avenue and Holly Street Thornton, Colorado. Western Environment and Ecology, Inc. Project Number 82-052-01.

Dear Mr. Canfield:

Western Environment and Ecology, Inc. (Western Environment) has performed quarterly groundwater monitoring on the above referenced property (Figure 1). These activities are described in the Colorado Oil and Gas Conservation Commission (COGCC) Form 27, Site Investigation and Remediation Work Plan (Project # 10065) approved on February 23rd, 2017.

Since the previous monitoring event, which occurred on August 18th, 2017, contractors working on behalf Toll Brothers, the current property owner, inadvertently destroyed all monitoring wells. As a result, on November 9th and 10th, 2017 replacement wells for TH-14, TH-15, TH-16 and TH-21 were completed (Figure 2). On November 12th, 2017 following well development and water quality assessment, two 40.0 ml vials were taken from the replacement wells. These samples were acquired, using appropriate quality assurance and quality control methods, and transported, under chain of custody controls, to Technology Laboratories in Fort Collins, Colorado. The samples were analyzed for benzene, toluene, ethyl-benzene and xylene (BTEX) and Total Volatile Petroleum Hydrocarbons (TVPH) utilizing EPA Method 8260B. The results are attached to this report and are presented on the following Table 1.

The results, while marginally above COGCC Table 910.1 benzene values (TH-16R and TH-21R), indicate a continued reduction in concentrations. It is the opinion of Western Environment that, with the removal of the source of the contamination (attached April 14th, 2017 Western Environment report) this reduction will continue, approaching Table values during the next quarter.

As always, do not hesitate to contact us with any questions.

Sincerely,
WESTERN ENVIRONMENT AND ECOLOGY, INC.

Greg D. Sherman, P.G.
President

Subject: Petroleum Contaminated Soil Removal, Holly Hills Subdivision, 144th Avenue and Holly Street, Thornton, Colorado. Western Environment and Ecology, Inc. Project Number 82-052-01.

Dear Mr. Carlson:

Western Environment and Ecology, Inc. (Western Environment) is pleased to provide the following documentation of the excavation, transport and disposal of petroleum contaminated soil from the above referenced property (Figure 1). The contamination was first described in a Limited Phase II Environmental Site Assessment prepared by CTL Thompson Inc. (CTL) dated January 9th, 2017. The report identified petroleum contaminated soil and groundwater at the location of a produced water storage tank (Figure 2). Following a January 16th, 2017 meeting between yourself and Scott Carlson of Carlson and Associates, Terry Hodge and Tony Dunning of Toll Brothers, Matthew Wardlow of CTL and Western Environment, it was determined that additional investigation was needed to evaluate the extent and magnitude of soil and groundwater contamination encountered in the January 9th CTL assessment.

The ensuing Western Environment report, "Limited Phase II Environmental Site Assessment for the Holly Hills Subdivision at 144th Avenue and Holly Street, Thornton, Colorado" dated February 7th, 2017, described the results of three additional groundwater monitoring wells and eleven soil borings which bracketed the CTL Thompson wells. Laboratory results of groundwater samples were below the Colorado Oil and Gas Conservation Commission (COGCC) and US EPA Drinking Water Maximum Concentrations Levels (MCL's) for benzene, toluene, ethyl-benzene, and xylene (BTEX). However, analysis of the soil samples reported that several exceeded the COGCC regulatory limits. Western Environment concluded that "that approximately 550 cubic yards of petroleum hydrocarbon contaminated soil above COGCC levels should be excavated, transported and disposed of at an approved facility".

This recommendation was presented to the COGCC in Form 19, Spill/Release Report on February 23, 2017 by Jack McCartney of McCartney Engineering, LLC. In addition to the excavation and disposal of contaminated soil, Western Environment recommended quarterly groundwater sampling for a year to confirm BTEX levels remain below US EPA, MCL's. Chris Canfield, Environmental Protection Specialist for the COGCC, reviewed the recommendation and approved the remediation work under Form 27 (COGCC Project Number 10065) assigning a Project Number of 10065.

Using the data collected in the February 7th report, waste characterization for disposal as Non-Hazardous Special Waste (attached) was received from the Front Range Landfill on March 15th, 2017. Beginning on March 20th, 2017, a track excavator removed the upper 4 to 5 feet of "clean" soil before encountering contamination. The clean material, which was identified visually and by photo-ionization detection (PID), was stockpiled to replace the excavated soil. Contaminated soil extended from approximately 5 feet to a maximum depth of 18.0 feet below the surface. Four hundred and eleven (411) tons (approximately 330 yards) of contaminated soil was excavated and loaded directly on trucks for transport to Front Range Landfill in Erie, Colorado (see attached photos). Waste disposal manifests are attached to this report. No groundwater was encountered in the excavation.

After removing the contaminated material, Western Environment acquired four conformational soil

2217 WEST POWERS AVENUE * LITTLETON, COLORADO 80120

PHONE (303)730-3452 * FAX (303)730-3461

WWW.WESTERNENVIRONMENT.COM

samples from the base of the excavation (at approximately 16.0 to 18.0 feet) and six soil samples from the walls of the excavation pit (at approximately 12.0 to 13.0 feet). These samples B-01, B-02, B-03, B-04, W-01, W-02, W-03, W-04, and W-05 were transported under Chain of Custody to Technology Laboratories in Fort Collins, and analyzed for BTEX and TVPH utilizing US EPA Method 8260 and 8015.

The results of the samples (attached) were received on April 5th, 2017, and are presented below.

Sample	benzene	toluene	ethyl-benzene	xylene	TPH GRO
B-01	ND	0.03 mg/kg	0.39 mg/kg	1.98 mg/kg	599 mg/kg

ND - Non-detect

* Colorado Oil and Gas Conservation Commission Table 910-1 Concentration Levels

** Colorado Department of Public Health and Environment Soil Cleanup Table March 2014.

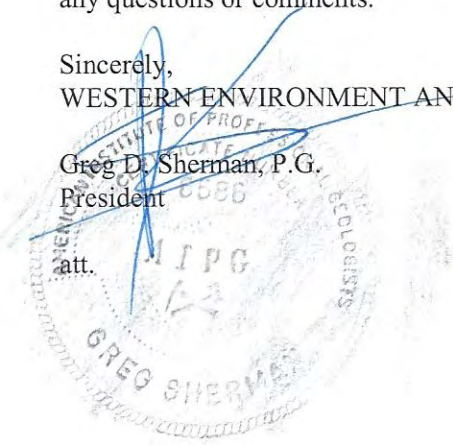

Based upon these results, it is the opinion of Western Environment that the contaminated soil identified in the February 7th, 2017, Limited Phase II Environmental Assessment has been removed and properly disposed.

We appreciate the opportunity to provide these services. Please feel free to contact us if you have any questions or comments.

Sincerely,
WESTERN ENVIRONMENT AND ECOLOGY, INC.

Greg D. Sherman, P.G.
President
