INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Crews were onsite the same day with vac trucks, front end loader, and shovels to remove impacted soil. It is estimated that 865 bbls of fluid were released; 800 bbls stayed inside containment, and 65 bbls spilled outside of containment. LT Environmental was onsite to assess impacted soil and collect confirmation samples.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Yes, ten soil samples were collected as part of the investigation. The confirmation soil samples will consist grab samples. Analysis will include BTEX and TPH. Sample nomenclature began with HPD01, HPD02, etc. Sample location diagram is attached.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted sludge and oil were removed by vac trucks. Soil was hauled offsite to an approved Waste Management facility

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Soil samples were collected from the excavation for field screening and laboratory analysis. Laboratory results for the confirmation soil samples indicate that TPH and BTEX concentrations are below COGCC allowable levels at the extent of the excavation.

Environmental	All wastes described are E&P wastes and not wastes generated by investigation activities such as purging wells or washing and rinsing equipment. Undid checkmark indicating 800 barrels or investigation derived water and 54 yards of soils. The water described is produced water (an E&P waste) recovered during the spill response and the soils are oily soils contaminated by the spill. The soils are described in the soil remediation summary tab and were disposed offsite.	12/19/2017
Environmental	site investigation is directly related to spill 452769. Changed facility on site investigation tab to 452769 instead of UIC facility 159270. added insitial form 19 document 401443220 to related forms	12/19/2017
