## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On December 11, 2014, a historic release was discovered while repairing the water drain line from the production tank to the produced water vessel. Excavation

activities were summarized in an Initial Form 19 submitted on December 13, 2014 (Document # 400751596) and in a Supplemental Form 19 submitted on December

18, 2014 (Document # 400754466). A topographic map of the site is included as Figure 1.

## OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☐ Were background samples collected as part of this site investigation?

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)            Volume of liquid waste (barrels)           

☒ Is further site investigation required?

Based on soil analytical results, PDC feels that the remaining soil impacts were successfully removed. However, based on groundwater analytical results and the general groundwater flow direction, the extent of remaining dissolved phase hydrocarbon impacts has not been delineated. Consequently, additional drilling and site investigation activities are required. The excavation extent and soil and groundwater sample locations are illustrated on Figure 2. Temporary monitoring well locations are illustrated on Figure 3. A groundwater elevation contour map is included as Figure 4. Soil analytical results are summarized in Table 1 and groundwater analytical results are summarized on Table 2. The laboratory analytical reports are included as Attachment A.

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Excavation activities were completed between December 11 and December 15, 2014. Approximately 246 cubic yards of impacted material were removed and transported to the Waste Management Facility in Ault, Colorado for disposal under PDC waste manifests. The lateral and vertical extent of the excavation was guided by field screening of volatile organic compound (VOC) concentrations in soil using a photoionization detector (PID). Soil samples collected from the sidewalls

of the final excavation extent exhibited constituent concentrations below COGCC Table 910-1 soil standards. Groundwater was encountered in the excavation area at approximately 6.5 feet below ground surface (bgs). Approximately 120 barrels of groundwater were removed from the excavation using a vacuum truck and

transported to a licensed water disposal facility. The groundwater sample (GW01) collected from the excavation area exhibited benzene concentrations in

exceedance of COGCC Table 910-1 groundwater standards. The excavation extent and soil and groundwater sample locations are illustrated on Figure 2. Soil analytical data is summarized in Table 1 and groundwater analytical data is summarized in Table 2. The laboratory analytical reports are included as Attachment A.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

EFR/AS events will be discontinued following the end of the second quarter 2017. Monitored natural attenuation (MNA) will be the selected remediation strategy for the site beginning the third quarter 2017 and will remain the selected remediation strategy through the first quarter 2018. Quarterly groundwater monitoring will be completed until four consecutive quarters of BTEX concentrations in compliance with regulatory standards are achieved.

## GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

Groundwater was encountered during excavation and drilling activities at approximately 4-6 feet below ground surface (bgs). Quarterly groundwater sampling at the five temporary monitoring locations was initiated in April 2015. PDC will continue quarterly groundwater sampling at the 12 temporary monitoring wells to monitor petroleum hydrocarbon impacts in groundwater using USEPA Method 8260. Groundwater monitoring will continue until four consecutive quarters of BTEX

concentrations in compliance with COGCC Table 910-1 groundwater standards are achieved.

## REMEDATION COMPLETION REPORT

### REMEDATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No

Do all soils meet Table 910-1 standards? \_\_\_\_\_

Does the previous reply indicate consideration of background concentrations? \_\_\_\_\_

Are the only residual soil impacts pH, SAR, or EC at depths greater than 3 feet below ground surface? \_\_\_\_\_

Does Groundwater meet Table 910-1 standards? \_\_\_\_\_

Is additional groundwater monitoring to be conducted? \_\_\_\_\_

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The excavation was backfilled and compacted with clean material and the ground surface was re-contoured to match pre-existing conditions. Subsequent to attainment of closure, the temporary monitoring wells will be plugged and abandoned.

Is the described reclamation complete? \_\_\_\_\_

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim? ☐ Final?

Did the Surface Owner approve the seed mix? \_\_\_\_\_

If NO, does the seed mix comply with local soil conservation district recommendations? \_\_\_\_\_

## IMPLEMENTATION SCHEDULE
