

# Inspection Photos

API: 05-067-05470

Operator: LOGOS OPERATING LLC

Inspection Date: 3/7/2018

**Photo 1. View of the project area from the northwestern corner facing center.**

**Photo 2. View of the eastern portion of the interim reclamation area from the southeastern corner facing northward. Revegetation is comprised of big sagebrush (*Artemisia tridentata*) with cheatgrass (*Bromus tectorum*) and western wheatgrass (*Pascopyrum smithii*) understory.**

**Photo 3. View of erosional channels in the southeastern portion of the project area where concentrated stormwater flows have eroded the cut-slope. Stormwater controls are needed to stabilize erosion here.**

**Photo 4. View of the western portion of the project area from the southwestern edge of the well pad facing northward.**

**Photo 5. View of dead sagebrush (*Artemisia tridentata*). Sagebrush die-off appears to be the result of project activities as it is downwind of separator. Reclamation in this area may be needed.**

**Photo 5. Another view of sagebrush die-off west of the separator (in background).**
