Google Earth aerial imagery taken October 15, 2015 appears to indicate surface disturbance from a pit, approximately 375 feet southeast of the well location (Lat/Long in above image).

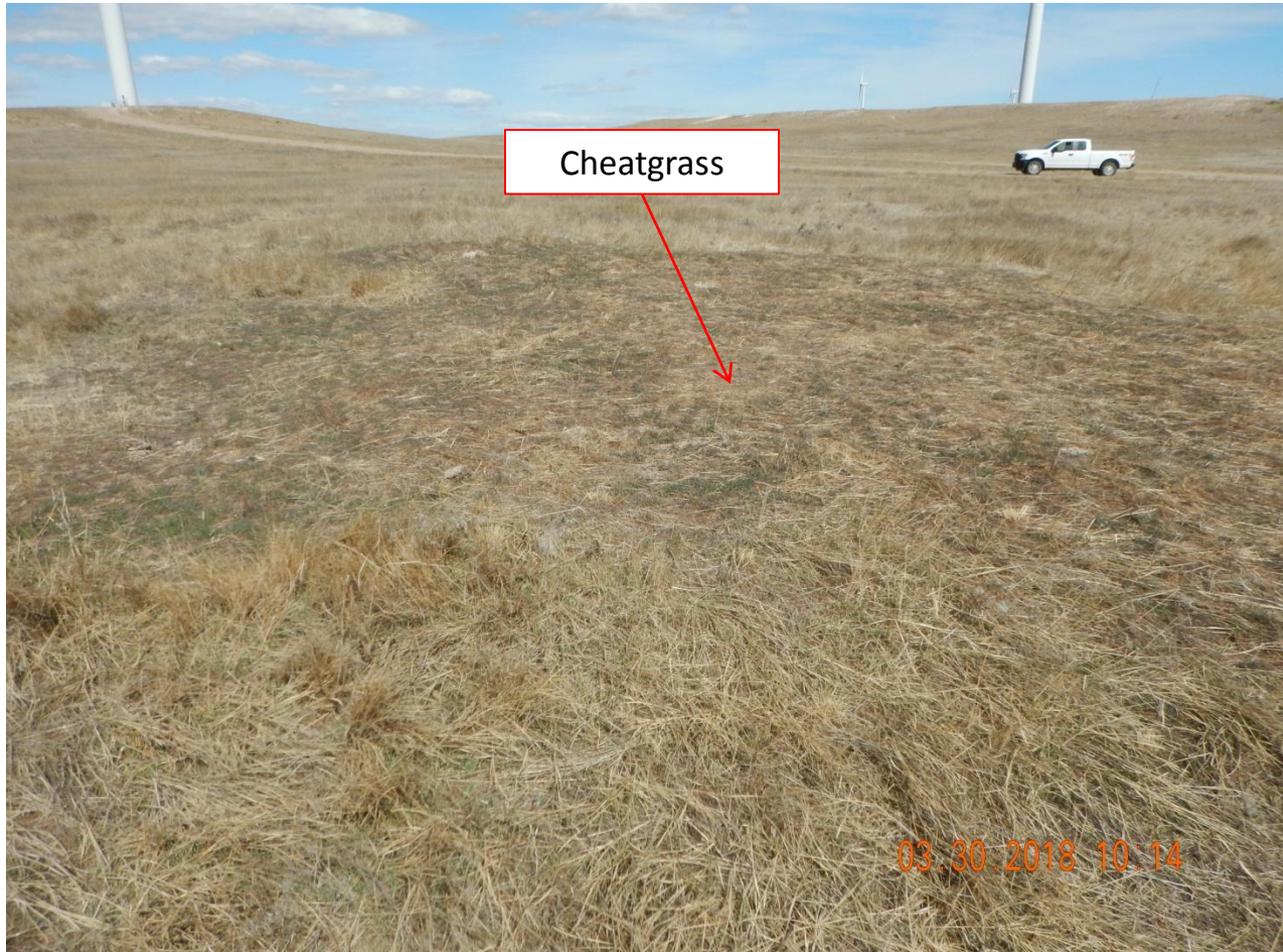

Photo 1. Photo taken from the approximate pit, facing North. Appears the pit has been backfilled but vegetation is not reflective of reference area vegetative levels. The vegetative growth in the central area of the pit consists of Cheatgrass (*Bromus tectorum*). Other areas of the pit are not reflective of reference area vegetative levels.
