## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	SOILS	NA	Soil sampling

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Foundation is planning to collect soil samples at the Hill 6-1 pit location in the locations provided on the attached Proposed Soil Sample Location map, with a hand auger decontaminated between each sample location.  
Once the sample locations have been approved, Foundation will schedule pit closure soil sampling in order to determine if impacts are present.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Foundation proposes to collect 6 soil samples by hand auger for the pit closure investigation - 2 base samples due to the length of the pit - and 4 sidewall samples at the height of any visible soil staining. The North sidewall sample will be collected from the area beneath the skim tank.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

# REMEDIAL ACTION PLAN

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Soil samples will be collected from the locations proposed on the attached map, and analyzed for BTEX, TPH, EC, SAR, and pH. Should any of the samples exceed the Table 910-1 standard, soil will be removed from the sidewall or base of the pit until the extent of impacts is determined.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Since soil samples have not been collected yet, Foundation will require additional data in order to develop the remediation plan. However, should soil samples in the pit base and sidewalls exceed the Table 910-1 standard, soil will be removed from the pit and transported to a licensed landfill until extent of impacts has been determined.

<b>COA Type</b>	<b>Description</b>
	If no indication of a spill or release is observed upon removal of the oil skim tank, collect one soil sample from the base of the oil skim tank excavation for BTEX and TPH laboratory analysis. If impacted soils are removed from the excavation, collect four sidewall samples and a base sample to document adequate impacted soil removal.
	In addition to the described soil sampling plan, please determine the extent of potential pH, EC and SAR impact within the pit berm material and footprint. Pit berm material may be used as backfill (depending on concentration) if it is covered by a minimum of three feet of clean cover fill.
