**General Comment:**

**Reclamation - Storm Water - Pit****Interim Reclamation:**

Date Interim Reclamation Started: \_\_\_\_\_ Date Interim Reclamation Completed: \_\_\_\_\_

Land Use: \_\_\_\_\_

Comment: Project area is surrounded by open grass fields and sagebrush shrubland. Revegetation is sparse and appears to be grazed. Revegetation needs to be monitored along the western cut-slope and the unused southwestern portion of the well pad, if vegetation cover is not increasing during the 2018 growing season, then seeding during the fall 2018 seeding window, no later than November 1, 2018, is required. Cattle exclusion may be needed.

## 1003 f. Weeds Noxious weeds? \_\_\_\_\_

Comment Approximately 100 musk thistles from the previous growing season are present with seedheads.

Corrective Action Thistles will need to be treated this year where rosettes observed. Seeds will remain viable for 10-15 years and therefore, subsequent monitoring and treatment will be needed.

Comment:		Erosion is occurring within the southern portion of the project area where concentrated stormwater flows off of the southern project area and along both sides of the southern access road.				Date: 07/06/2018
Corrective Action:		Stormwater controls are needed to de-energize stormwater flows exiting the southern project area. Successful revegetation within the unused portions of the southwestern well pad will help stabilize erosion here. This will be required during fall 2018 seeding window as described above, if vegetation cover is not increasing during the 2018 growing season.
