INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Per Form 19 filed 8/28/17 the oil on the water pit was soaked up utilizing absorbent pellets and then picked up from the pit area with a backhoe and hauled off location via truck on 8/18/17. Photo attached to said Form 19 showed pit after removal of oil. The material from the pit along with contaminated material that was picked up from along side CR 26B was hauled to the Ault, CO Waste Management disposal facility and manifests submitted with subsequent Form 19 to closing the spill and opening this Form 27 Remediation Project.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

After removal of the existing tin horn and any contaminated soil surrounding it, a soil sample will be taken from the bottom of the tin horn along with sidewall samples from the excavation area. Samples will also be taken from the bottom of the pit area, along with from each wall of the pit. Additional samples will be taken along the spill path as shown on the attached map. All samples will be tested in accordance with the Table 910-1 concentration levels, and once all samples comply, then clean soil material will be used to backfill the excavated area.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The well has been shut-in since the incident and plas are to PxA the well. A Form 6 will be filed no later than July 6, 2018 and this action will remove the source of the produced oil and hence any spill possibility. The tin horn will be removed and if any contaminated soil is found, it will be laid out on black plastic and bermed to prevent any run-off, or loaded directly into dump truck to haul to commercial disposal.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

In the event any contaminated soil is found, it will be hauled to commercial disposal facility.
