General Comment:

This is an Interim Reclamation & Stormwater focused Inspection, a Follow Up to InspDoc#680102236 Dated 9/26/17. It appears that Corrective Actions remain outstanding. There are five Corrective Actions and three Corrective Action Dates in Reclamation Section.

Any Corrective Actions from previous Inspections that have not been addressed are still applicable.

Comment

Areas no longer needed for Use, Production, Drilling or Subsequent Operations have not been reclaimed. Areas of Interim Rec are sparsely vegetated & weedy. Infestation of Noxious Weed, Scotch thistle is established on Location & access rd to the degree of restricting vehicle access & movement; portions of the road are a monoculture of Cheatgrass (C List Noxious weed) interspersed with Russian thistle. Noxious weeds have migrated off location & infected adjacent rangeland. Thistle plants are maturing & thousands of rosettes are emerging in one depression area. Weed Control, Monitoring program and schedule for Location & Access Rd was to be in place by 11/15/17. It is apparent that controls have not been applied this year. Refer to Photos att

Corrective Action

There are three CAs in this Section.
 CA#1) Shrink Location for Interim Reclamation per COGCC 1003 Series Rules. Conduct reclamation in areas no longer needed for Use or production, including weedy sparsely vegetated Fill Slopes in revegetation plans, installing appropriate BMPs to Stabilize Areas until Vegetation establishes. Reclamation Activities should be complete by 11/30/17.
 CA#2) Mow weeds (Scotch Thistle) on Access Road, enabling accessibility of Site by 11/1/17.
 CA#3) Control Noxious Weeds ASAP. A short CA date is required to control weeds before seed viability and when plants are most susceptible to controls (rosette stage). Weed Control, Monitoring program and schedule for Location & Access Rd need to be in place by 11/15/17.
