**Complaint**

Comment: Noise complaint #200446074 by landowner, newly installed compressor. A 15 minute noise survey was conducted at aprox. 10:30 AM with calm to 2 mph winds from E/SE, skies clear, temp 74 deg F. 3M SoundPro DL sound meter (ser. no. BGN10009) was placed 100' away from sound wall on main noise source (compressor, pumping unit was inactive at time of inspection) on a tripod 4' above ground in direction of current structure on property. The spot at 100' was chosen due to the topography, fence and tress and final results calculated to the equivalent at 350'. Pre and post calibrations were performed using a calibrated calibrator.

Sound pressure averaged 60 db(a) over the 15 minutes which extraploates to 49.1 db(a) at 350' reference point.
