VEGETATIVE COVER _____

Comment:

Corrective Action:	<p>Previous inspections identified two large areas of degradation (salt kills) with stormwater erosion that required remediated/reclamation to be conducted. Reclamation activities appear to have been conducted on the northern spill areas; area appear to have been regraded, seeded and stabilized, germination evident.</p> <p>Reclamation activities do not appear to have been conducted on the southern spill area per corrective actions; large areas of the spill area remain bare and exposed soil, or predominantly undesirable weedy plant species. Erosion degradation remains evident. Unable to find evidence of revegetation/reclamation activities or stabilization. Corrective action and corrective action date remains applicable.</p>	Date 08/31/2017
	<p>Perform reclamation per COGCC 1000 series reclamation rules and requirements and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and monitor/manage location until FR has passed.</p>	
Overall Final Reclamation Fail Well Release on Active Location <input type="checkbox"/> Multi-Well Location <input type="checkbox"/>
