

## Remedial Correction Plan for Wells ¼ - Mile – EWS 4B

All wells within the ½ mile Area of Review (AOR) were reviewed for the entire length of the wellbore. No wells within the AOR penetrated the top of the Lyons formation except for the EWS 4 and 4A. The EWS 4 has production casing cement brought to 920 feet, and the EWS 4A has production casing cement brought to 940 feet. As such, no remedial correction of any type is anticipated to be necessary to ensure adequate confinement for the EWS 4B well.
