TRANSECT RESULTS OF DISTURBED AREA% _____

TRANSECT RESULTS OF REFERENCE AREA% _____

TOTAL % OF DESIRABLE VEGETATION COVER _____

VEGETATIVE COVER _____

Comment: The entire well location is dominated by Puncturevine which is not a desirable plant species. Little to no desirable vegetation was observed. Operator will likely need to perform long-term weed management as this is a persistent weed with multiple flushes occurring during the growing season.

Corrective Action:	Perform reclamation in accordance to COGCC 1004 reclamation rules and requirements. Reseed disturbance areas using a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of reference area levels. Ensure erosion controls are implemented to stabilize the seeded soil. Operator shall continue to monitor and manage this site until the location meets Rule 1004 standards. Final reclamation activities shall be complete no later than November 16, 2018 or sooner depending on environmental conditions.	Date	11/16/2018
