<p>Comment: Stormwater diversion within the western and northwestern project area is full of sediment. Sediment is not being properly managed and prevented from transport offsite as a pollutant. Sandy berms in the western and southern project area are not stabilized with vegetation or sufficiently compacted.</p> <p>Corrective Action: Sediment within the project area needs to be better managed. Engineered sediment traps, and frequent maintenance will likely be needed to contain sediment flows and prevent sediment discharge from the project area. Berms need to be stabilized.</p>						Date: 12/07/2018
Pits: <input checked="" type="checkbox"/> NO SURFACE INDICATION OF PIT
