Daryl & Cynthia,

Attached is a draft of the summary table comparing the two water samples as well as the lab report for the sample collected on 4-13-11. As I mentioned on the phone message, the Arsenic and Cadmium concentrations exceed the drinking water standard and Lead and Selenium were also detected. The rest of the results were consistent with the last sample. I'm having the lab double check to make sure there were no problems with the analysis. In the meantime, I think it would be best to collect another sample for metals to verify if these results are valid.

Please let me know if Thursday morning is ok to collect the follow up sample.

Thanks,
John
