RE: Ray Westhoff # 1 (API # 05-087-06387) Reclamation Status

To Whom It May Concern:

At the request of Noble Energy, Inc (Noble), Duraroot, LLC (Duraroot) and SolSpec, LLC (SolSpec) completed a field survey of the Ray Westhoff # 1 well pad (API # 05-087-06387) on November 1, 2018. During the field survey, aerial images of the location were collected using an unmanned aerial vehicle (UAV) to document the status of the location and recent reclamation efforts. In addition to the aerial imagery, a Duraroot scientist verified the reclamation status of the site on November 1, 2018.

The current land use on the Ray Westhoff # 1 well pad, access road, and adjacent area is native range. The Ray Westhoff # 1 well pad has been returned to original grade. Soils have been deep ripped to a minimum depth of 18-inches; soil amendments consisting of elemental sulfur (0.5-ton per acre) have been applied; soils have been agriculturally disked; and the location has been seeded to a native grass seed mix to re-establish native cover and provide soil stability.

The Ray Westhoff # 1 well pad and access road were recently reclaimed and seeded (October 26, 2018); therefore, vegetation cover is minimal on the location. Duraroot/SolSpec recommend that the Ray Westhoff # 1 well pad location be given more time for successful vegetation establishment and that the location be monitored for the next one (1) to two (2) growing seasons, at which time the location will be re-assessed for reclamation status and qualification for Form 4 Sundry application to the Colorado Oil and Gas Commission (COGCC), as required by the 1000 Series Rules and Regulations (1004.c.).

Please do not hesitate to contact me at (406) 580-0373 or khouse@duraroot.com with any questions or comments.

Best Regards,

Kelley House, CPSS
