Re: Request for Rule 317.p Exception (Open-Hole Logging Requirements)

Dear Director,

Please let this letter serve as a request for a Rule 317.p Exception for the proposed wells listed above. Rule 317.p requires logging all wells with a minimum of a resistivity log with gamma ray to adequately describe the stratigraphy and open-hole logs to adequately verify the setting depth of surface casing and aquifer coverage.

Crestone Peak has identified an existing well adequate open-hole well log control that is within 750' of the proposed wells' surface hole locations. See well description below.

Well	API No.	Distance	Bearing	Log & Doc No.
Hingley Farms 1	123-07367	675'	SW	Induction, 12307367 CB & Gamma Ray, 12307367

Crestone is requesting to run a combination RST/CBL (reservoir saturation tool using pulsed neutron) cased-hole log on the 7" casing of one of the first wells to be drilled on the pad. All of the captioned wells will have a cement bond log with gamma ray run from the intermediate casing shoe, or as close as possible, to above surface casing shoe to verify the setting depth of surface casing and aquifer coverage. The horizontal portion of all subject wells will be logged while drilling with a gamma ray tool.

The Form 5 for each well shall clearly state, "No open hole logs were run" and shall reference the Rule 317.p Exception granted for the well. The Form 5 for each well on the pad will identify the well that was logged with alternative logs by API number, well name and well number.

Thank you for your assistance with this matter. If you have any questions or comments, please contact me at (720) 410-8487.

Sincerely,
