Date

On December 12, 2018 COGCC SW EPS Jim Hughes conducted a follow up environmental field inspection of the BP Richardson G #2 Spill/Release Point ID #459307. For the most recent field inspection report of this facility, please refer to document #688800387. BP representative Jeff Davis was on site during this field inspection.

During this inspection it was observed that the 3" fiberglass lines had been exposed with a hydro vac truck. There is a 12" steel casing sleeve at the road crossing. The fiberglass lines appear to come out of the casing sleeve at a downward angle. It was reported that when the release was discovered, fluid was coming out of the casing vent. Once the casing sleeve was exposed, fluid reportedly came out of it.

A Williams pipeline running perpendicular to the BP gathering lines has been potholed in preparation of mechanical excavation of the fiberglass lines to expose the nearest pipe joint. A crew was preparing to expose the fiberglass lines on the western edge of the roadway.
