## OPERATOR COMMENTS AND SUBMITTAL

Comments

a. Description of the situation that has resulted in an UNPLANNED sidetrack: While pumping production cement job with casing on bottom, string pressure up as bottom plug landed on float collar. Circulation was unable to be established. Cement was drilled out to the production casing shoe with the drilling rig and perforations were shot at 8568' in attempt to break circulation. This was not successful so casing was cut at 5700' (depth of free pipe) and pulled. Abandonment plug will be set right above fish top in the Williams Fork/Ohio Creek formation.

b. Total measured depth reached in the wellbore being plugged back: 8706'

c. Casing set – size(s) and measured depth(s): Conductor 16" set at 90'; surface 8 5/8" set at 1556'

d. Description of fish in the hole (if any) – including top and bottom measured depths: 4-1/2" 11.6# P-110IC casing from 5700'-8696'

e. Description of proposed plugs: setting measured depths, heights, and cement volumes: Plug #1 5500'-4900', 600' height, 228 sacks; Plug #2 3000'-2400', 600' height, 264 sacks

f. Type of cement to be used for all plugs, including slurry weight (ppg) and yield (cf/sk): Plug #1 Neat G cement, 15.8 ppg, 1/15 cf/sk; Plug #2 PlugCem, 17 ppg, 0.99 cf/sk

g. Measured depth of proposed sidetrack kick-off point: 3000'-2400'

h. Proposed objective formation(s) for sidetrack hole – new or same as the wellbore being abandoned: Same (WFILS)

i. BHL Target for sidetrack hole – new or same as the wellbore being abandoned (NOTE: a change in the BHL must be reviewed and approved by COGCC Permitting prior to completing the sidetrack. Drilling a sidetrack to an unapproved BHL could result in an NOAV, plugging the well, or both): New. 864 FSL, 1474 FWL, 39.240668, -107.724354

j. Verbal/email approval to plug back and sidetrack – indicate the name of the COGCC Engineer who granted verbal/email approval, as described in Step 1.b., and the date approval granted: Craig Burger granted approval on 12/17/2018.
