Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 1/5/19 a vac truck driver arrived at the E28OU location to offload his truck and he identified fluid surfacing on the pad location. The driver contacted his pusher who contacted Caerus operations and Caerus gas control. The flowline from the injection pump to the injection well failed releasing fluid onto the pad location. No fluid has left the site and the location has been locked out an environmental assessment will follow and the spill volume is being determined.
