Corrective Action: _____ Date **05/31/2017**

Perform reclamation in accordance to COGCC 1000 series reclamation requirements including, but not limited to, compaction alleviation, recontour/regrading and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of predisturbance or reference area levels on the access road and location. Use a seed mixture requested by the landowner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed.

<p>Inspection doc. #6820551805, #682502590, #682502913 and #682503694 required operator to perform reclamation on the location and access road in accordance with COGCC 1000 series reclamation rules. Inspections documented that access road has not been recontoured/regraded to that of the reference area and remains predominantly undesirable weedy plant species or bare and exposed soil. Inspections also documented that though the pump jack/concrete base has been removed per corrective actions, no additional reclamation/revegetation activities appear to have been conducted as the well location also remains predominantly bare and exposed soil.</p> <p>Access road and well location remains predominantly undesirable weedy plant species or bare and exposed soil. Access road does not appear to have been recontoured/regraded to that of the reference area. Unable to find evidence that additional reclamation has been conducted per the corrective actions and per 1004 reclamation requirements. This is the 5th final reclamation inspection requiring reclamation work conducted, location is being referred for enforcement. Original corrective action and date remains applicable.</p>	trujilloam	01/11/2019
