**General Comment:**

This is a Reclamation & Stormwater focused Inspection. This Location, built in 2015, not yet Drilled, has an Approved Delayed Interim Reclamation Variance Request (Doc#401306982). Eighteen XX Wells related to this Location had Permits Refiled and Approved 3/15/19.

**Storm Water:**

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment
<p><b>Comment:</b> It appears that topsoil has been bermed around perimeter of location functioning as a stormwater BMP. Topsoil is not fully segregated/ stabilized &amp; has the potential for degradation due to mixing with subsoil and wind/water erosion, and has potential to become a source of sediment pollution.</p> <p>Ditch needs some general maintenance. Compaction/ stabilization of the base of the ditch (flow path) also needs to be addressed as it is not properly stabilized, especially at North end of site.</p> <p>Please see COGCC Comments Section at end of this Document for Continuation of Stormwater Comment.</p>						
<p><b>Corrective Action:</b> There are Four CAs in this Section.</p> <p>1) Stabilize earthen berm. Use long-term methods to stabilize the berms. B Vegetation is preferred long-term stabilization.</p> <p>2) Install BMP (i.e. Wattle) along inside base of berm to fully segregate and prevent topsoil degradation.</p> <p>3) Maintain Ditches.</p> <p>4) Install properly sized and designed sediment trap/s and outlet/s based on the size of location.</p>						<p>Date: 04/15/2019</p>
<p><b>Pits:</b> <input type="checkbox"/> NO SURFACE INDICATION OF PIT</p>						

**COGCC Comments**

Comment	User	Date
Continuation of Stormwater Section Comment:	colbyl	03/16/2019
Stormwater outlet and BMPs at Northeast corner of site are not installed or designed according to good engineering practices; BMPs are dysfunctional. For instance, the discharge point at top of berm is elevated too high to function properly, round rock has been used for the outlet protection which is not the proper material to be employed as armoring/stabilization per good engineering practices.
