**Reclamation - Storm Water - Pit****Interim Reclamation:**

Date Interim Reclamation Started: \_\_\_\_\_ Date Interim Reclamation Completed: \_\_\_\_\_

Land Use: \_\_\_\_\_

Comment: Project area is surrounded by pinyon juniper woodland and sagebrush shrubland. Revegetation is progressing within portions of the project area. However, eastern fill slopes are sparsely vegetated and eroding. Revegetation needs to be monitored during the active growing season and if not increasing, then revegetation will be required during the fall 2019 seeding window.

Comment: Stormwater erosion is occurring within the eastern fill slopes, forming erosional channels that continue offsite. Sediment is deposited along wattles downslope from the project area.

Corrective Action: Stormwater controls need to be installed to stabilize erosion on eastern slopes and within erosional channels. Area along the flowline where sediment from this well pad and the adjacent well pad is deposited, needs to be revegetated. Stormwater flows entering this area need to be de-energized to prevent further sedimentation and allow for vegetation establishment.

Date: 04/19/2019

Pits: ☒ NO SURFACE INDICATION OF PIT
