COMMENTS:

Plug set down hole for offset PDC MCglothlin/Wacker frac at 6,492' and a 5K wellhead was installed at surface; all valves are shut. Casing was pressure tested up to 2000 psi for 15 mins and held. The two sacks of cement placed on top of the CIBP technically designates this formation as AB, however, the TA distinction was chosen because PDC intends to return this well to production upon the conclusion of the frac.
