COA Type

Description

	Drilling/Completion Operations: The following COA will apply: •Water/Bentonite-Based Drilling Mud (WBM) and Oil-Based Drilling Mud (OBM) Generated Solids / Cuttings Management and Offsite Disposal. •A closed loop system must be implemented during drilling (as indicated on this Form 2 and Form 2A). All cuttings generated during drilling with oil based mud (OBM) must be segregated from water/bentonite based mud-(WBM-) generated drill cuttings and placed separately on the well pad. All OBM-generated drill cuttings must be kept in tanks/containers, or placed on a lined/bermed portion of the well pad; prior to disposition. The moisture content of any OBM-generated drill cuttings in a tank, cuttings containment area, or pile shall be as low as practicable to prevent accumulation of liquids greater than de minimis amounts. The operator has indicated that 'Cuttings Disposal' will be "Offsite" and that the 'Cuttings Disposal Method' will be "Commercial Disposal" (as shown in the 'Drilling Waste Management Program' sections of the Form 2A and this Form 2). The trucks used for offsite disposal must have a liner and the operator must implement measures (covers, misting, etc.) to reduce dust and PM emissions during transport of solids materials to and from the well pad location. Any liners associated with oil-based drilling mud and OBM-generated drill cuttings must be disposed of offsite per CDPHE rules and regulations.
