COMMENTS:

The Sunmarke 28V-434 (05-123-38901) had 90 PSI on the bradenhead during its annual test. We would like to utilize an existing flowline that is currently on location as an abatement system for all four (4) wells on that South pad (28V-234, 304, 434; 28W-414). PDC is requesting we convert the existing flowlines into bradenhead abatement that will send the fluid to the controlled production tanks.

Based on the information provided herein, this Sundry Notice (Form 4) complies with COGCC Rules and applicable orders and is hereby approved.

COGCC Approved: Wolfe, Stephen Date: 7/5/2019

CONDITIONS OF APPROVAL, IF ANY:

<u>COA Type</u>	<u>Description</u>
	1)Any gas produced from the Bradenhead will be controlled with the best available technology to protect health and safety. Operator will ensure that any emissions do not constitute a nuisance or hazard to public welfare and are subject to CDPHE regulations. 2)Immediately upon discovery Operator will implement measures to reduce surface casing pressure to below 50 psi. Operator will further utilize an open flow system to keep back pressure on the bradenhead to below 50 psi. Periodically well will be blown down to 0 psi, shut in and allowed to build to 50 psi or for 48 hrs, prior to returning to open flow into the flowline. Pressure and rate will be recorded in such a way as to characterize the well performance for comparison over time. 3)Commencing with the submission of this Sundry, Operator will have 6 months to evaluate the effectiveness of proposed mitigation followed by a summary of well performance submitted via sundry to the COGCC at which time the future course of action will be considered.
