General Comment:

This is an Interim Reclamation & Stormwater focused Inspection, a Joint Inspection with Field Inspector Emily Waldron, Any Corrective Actions from previous Inspections that have not been addressed are still applicable. Location was built in late Fall 2018. Three PR Wells are on site and thirteen APDs in Process. This site lies within a Sensitive Wildlife Habitat; Greater Sage Grouse and within CPW Black Bear Area.

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment
Silt Fences	Fail					
Wattles	Fail					
		Other	Fail			Lack of BMPs on access road & entry.
Other	Fail					Weir

Comment: Silt fence is compromised in numerous areas all along site perimeter; overwhelmed with sediment at points and being undercut by stormwater in others. In one area silt fence has been completely buried by dirt work on site. Large amount of sediment migration off of site is occurring. Wattles separating topsoil from subsoil need maintenance. There is absence of BMPs at entries and along access road, allowing sediment migration. Weir is not installed in position to function properly, has no settling BMP receiving & is conveying SW directly into silt fence, no series of BMPs to settle sediment, dissipate energy or discharge stormwater. Refer to Photo Log attached.

Corrective Action: Install sufficient/effective BMPs in accordance with, and monitoring per Good Engineering Practices per Rule 1002.f ; Using redundant BMPs in series to minimize overloading & prevent potential failures. Address erosion control as primary measure & address sediment control as secondary measure.

Shorter CA date is given because of concern of monsoon rains further exacerbating the sediment migration concerns at site.

Date: 07/23/2019

Pits: ☐ NO SURFACE INDICATION OF PIT
