REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No _____

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted soil will be excavated and treated onsite by chemical oxidation using hydrogen peroxide. The stockpiled soil will be processed through a soil shredder, and sprayed with hydrogen peroxide as it passes through the shredder. After confirmation analytical testing is complete, treated soil will be used as backfill material. Additional source material will be excavated during plugging and abandonment procedures.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

An air sparge and soil vapor extraction remediation system was installed to treat residual soil and dissolved phase groundwater. Twenty one (21) monitoring wells will be sampled for BTEX on a quarterly basis to monitor the dissolved BTEX plume and ensure it is stable and decreasing. A source well will be installed where the produced water vessel was located to determine if residual absorbed and/or desorbed impacts exist at the location. This well will be installed and sampled prior to August 15, 2019.
