REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No _____

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 10,250 cu/yds of impacted soil was treated by mixing hydrogen peroxide into the soil and 7,400 cu/yds of impacted soil was removed from the location and disposed of at a certified landfill. Confirmation soil samples were collected above the phreatic zone from the excavation base and sidewalls to determine the lateral and vertical extents of impacts.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Once the proposed monitoring well placement locations are approved, monitoring wells will be installed to assess if there is any remaining residual absorbed impacts, delineate dissolved phase impacts, and achieve point of compliance. Additional monitoring wells may be installed once initial laboratory analytical is received to achieve point of compliance. This environmental assessment will be scheduled prior to September 15, 2019 pending COGCC and landowner approval.

OPERATOR COMMENT

The area between and in the vicinity of TP26 and W02 was treated with hydrogen peroxide during soil mixing activities, soil mixing ceased and desorption may have occurred and migrated causing additional impacts above COGCC standards. The area was excavated, confirmation soils samples were collected by APEX, and soil borings will be installed to ensure soil is below COGCC Table 910-1 standards. COA documents are attached per form 27 document number 402056202.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
