CORRECTIVE ACTIONS:

1 CA# 130545

Corrective Action: It appears that the mentioned flowline on the west side of the pump house has been discharging fluids onto the ground (erosion, mud cracks). No salt or hydrocarbon staining observed at time of inspection. Operator shall provide COGCC with the purpose of the flowline and source of fluids discharged.

Date: 10/13/2019

Response: CA COMPLETED

Date of Completion: 09/23/2019

Operator Comment: The 2-inch flowline observed was originally put in place to drain a sump in the pump house if water were to collect in the sump from changing filter bags or pump maintenance. The discharge pipe was never used, instead a submersible pump or vacuum pump is used to remove water from the sump when present. The pipe has been

removed and the sump has been sealed with cement. The erosion and mud cracks observed during the inspection are from storm water as evident in the same mud cracks and erosion in the storm water system further west from the erosion and cracks observed. (see photos)
