Re: Request for Extension
Sindt #7 Disposal Well Workover

Dear John,

This letter is a written statement of my request and summary of related circumstances as discussed over the phone this morning.

Accordingly, Lewis & Clark, as operator of the Sindt #7 well herewith requests an extension to June 29, 1991 to commence planned workover operations on the Sindt #7 injection well.

This request is based upon the following related circumstances:

1. Lewis & Clark, although Operator, is not an owner of Sindt #7 well. Refusal of a significant owner to participate in the workover has precluded an earlier commencement of the planned operations. The disagreement between owners has been resolved verbally and a written agreement between the parties will be executed this week.

2. The currently shut-in DuBois #1 well (NWNE Sec 7, 9n-52W) is the only present source of produced water for continued operation of the Sindt #7 well. A fifteen (15) day electrical submersible pump production test of this well is scheduled to commence during the week of June 10th. Results of this production test will significantly affect the future role of the subject Sindt #7 well.

Your consideration of this request is most appreciated.

Very truly yours,

Donald R. Hembre
