Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Last night after a water hauler pulled a load, the water load line sprung a leak from a pinhole on the bottom of the pipe. This hole was from long term internal corrosion. The load bucket valve was shut but the valve on the water tank outlet was left open and water slowly leaked from the pinhole into containment. A vac truck removed approximately 22 bbls last night and 10 bbls of standing production water this morning. Total volume spilled is estimated at 35 bbls, all in containment. Nikki Graber with COGCC was contacted via telephone 11/9/2019 at 10:25 am and voice message was left providing notification of the release.
