Re: J & D Sand Gas Wells
Logan County, Colorado

Dear Mr. Albright:

ROMAC owns working interests varying from 22 percent to 37.5 percent in the following wells:

Enstar 29-1 Vern Harley Sec. 29-T9N-R52W ✓
KEE 4-1 Finnigsmier Sec. 4-T8N-R48W
KEE 1 Goddard Sec. 4-T8N-T48W

All of these wells are extremely water sensitive and as a result of frequent shut-in practices by KNEnergy, serious water problems are developing. Experienced operators in this area are well aware of the damage that can be caused by repeated shut-in practices and it is my understanding that certain similar wells in the Sterling, Colorado, area have been allowed to sell gas on a continuing basis in order to avoid this type of damage.

In the interests of good gas field practice and conservation, we are requesting that the above-named wells be allowed to sell gas on a steady basis in the future so that the maximum amount of gas may be recovered thus avoiding premature abandonment.

Your consideration and approval of this request will be greatly appreciated.

Very truly yours,

ROMAC Exploration Company, Inc.

Robert C. Roehrs, President
