Details of Plan of Work: (State names of and expected depths to objective sands.
 Show sizes, weights, and length of proposed casings; indicate mudding jobs, cementing
 points, and all other important proposed work.)

We propose to drill a well on the above described location using rotary tools, to be
 known as True Oil Company, R. H. Fulton, Wagner #3 Well. 8-5/8 24# new casing will
 be set as surface casing at least 90' below the surface of the ground and will be
 cemented to the surface with 50 sax of cement, using an approved method.

This well will test the "D" and "J" Sands; the "D" sand is expected at approximately
 4800 feet, and the Skull Creek shale is expected at 5000 feet. If commercial production
 is encountered, 5½" OD 14# casing will be run through the productive zone and cemented
 by an approved method.

Approved: SEP 15 1955
