1. Introduction

This report summarizes the groundwater monitoring and remediation activities conducted during the third quarter 2017 at the County Road (CR) 20 and Highway (Hwy) 85 pipeline release (Site) in Fort Lupton, Colorado (Figure 1). Tasman Geosciences (Tasman) performed these activities on behalf of DCP Midstream, LP (DCP). The field activities were conducted with the purpose of monitoring groundwater flow and quality conditions. Current Site conditions were evaluated from field data and analytical laboratory results collected during the reporting period on August 1, 2017.

2. Site Location and Background

The Site is located in the southwestern quarter of the southwestern quarter of Section 17, Township 2 North, Range 66 West (approximate coordinates 40.130908 degrees north and -104.806673 degrees west). It is approximately 0.20 miles east on CR 20 from the intersection with Hwy 85, Ft. Lupton, Colorado.

On May 28, 2014, a petroleum hydrocarbon release was discovered following pipeline repair activities. An initial Form 19 was submitted to the Colorado Oil and Gas Conservation Commission (COGCC) on June 5, 2014.

3. Groundwater Monitoring

This section describes the field and laboratory activities performed during the third quarter 2017 groundwater monitoring event. Quarterly monitoring activities were conducted on August 1, 2017, and included Site-wide groundwater gauging and sampling. Figure 2 illustrates the groundwater monitoring network locations utilized to monitor the Site.

3.1 Groundwater Elevation Monitoring

Groundwater levels were measured to evaluate hydraulic characteristics and provide information regarding seasonal fluctuations in groundwater elevations at the Site. During the third quarter 2017, groundwater levels were measured at six (6) monitoring well locations (BH01-BH03 and BH05-BH07).

Groundwater levels were measured on the north side of the well casing to the nearest 0.01-foot using an oil-water interface probe (IP). Groundwater level data were later converted to elevation (feet above mean sea level [AMSL]). Measured groundwater levels and the calculated groundwater elevations are presented in Table 1.

A third quarter 2017 groundwater elevation map, included as Figure 3, indicates that the groundwater gradient in proximity to the Site is generally flat. The relatively small scale between the differences in groundwater elevation and spatial distances between monitoring locations at the Site do not allow for accurate gradient contouring. Observed variations in groundwater elevations are likely attributed to several factors including seasonal fluctuations, increased use of the irrigation ditch to the west of the Site, flooding or increased irrigation of the farm to the north of the Site, and/or shallow groundwater use for irrigation to the east of the Site. Groundwater elevations will continue to be monitored during subsequent events. The range of groundwater elevations, average elevation change from the previous monitoring

event, and the calculated average hydraulic gradient (using elevations from BH03 and BH06) at the Site are summarized in the table below.

Summary of Measured Hydraulic Parameters

	Third Quarter 2017 (8/1/17)
Maximum Elevation (Well ID)	4,864.71 (BH03)
Minimum Elevation (Well ID)	4,864.65 (BH02 and BH06)
Average Change from Previous Monitoring Event – All Wells	4.48 feet
Average Hydraulic Gradient (ft/ft) / (Well IDs)	0.0008 (BH03 to BH06)

3.2 Groundwater Quality Monitoring

Subsequent to recording groundwater level measurements at each monitoring well, groundwater samples were collected from the six Site monitoring wells using disposable polyethylene bailers.

A minimum of three well casing volumes of groundwater were purged from each monitor well prior to collecting groundwater samples. Groundwater samples were placed in clean laboratory supplied containers for the selected analytical methods, packed in an ice-filled cooler and maintained at approximately four degrees Celsius ($^{\circ}\text{C}$) for transportation to the laboratory. Groundwater samples were then delivered under chain-of-custody procedures to Summit Scientific Laboratories (Summit) in Golden, Colorado for analysis.

Water quality samples were submitted for analysis of benzene, toluene, ethylbenzene, and xylene (BTEX) by United States Environmental Protection Agency (USEPA) Method 8260B.

Table 2 summarizes BTEX concentrations in groundwater samples collected during the third quarter 2017 monitoring event. Historic analytical results up to and including the third quarter 2017 event are included in Appendix A and the laboratory analytical report for the third quarter 2017 is included in Appendix B. Analytical results are also displayed on Figure 4.

Analytical results/observations are summarized below:

- BTEX concentrations from all of the Site monitoring wells were below the COGCC Table 910-1 standards and/or laboratory detection limits during the third quarter 2017 monitoring event.

4. Remediation Activities

This Section includes a description of the active remediation activities at the Site along with observations during remediation efforts.

4.1 Groundwater Remediation Activities

As reported in previous quarterly monitoring reports, mobile, vacuum enhanced fluid recovery (EFR) groundwater remediation events were initiated at the Site during the third quarter 2015 and discontinued

during the fourth quarter 2016. Due to the absence of light non-aqueous phase liquid (LNAPL) as well as decreased dissolved phase BTEX concentrations, supplemental groundwater remediation activities were not conducted at the Site during the third quarter 2017.

5. Conclusions

Comparison of the third quarter 2017 monitoring data and historic information provides the following general observations:

- Groundwater elevations and flow direction at the Site continue to fluctuate when compared to previous quarterly sampling events as indicated by the groundwater elevations depicted on Figure 3 and summarized on Table 1. During the third quarter 2017 monitoring event, groundwater flow was generally to the east which is consistent with historic monitoring data. Groundwater flow directions will continue to be monitored during subsequent quarterly events.
- For the second consecutive quarter, BTEX concentrations were below COGCC standards and/or laboratory detection limits during the third quarter 2017 monitoring event at all 6 monitoring well locations.
- Mobile EFR remediation activities were discontinued in November 2016 due to absence of LNAPL at the Site.

6. Recommendations

Based on evaluation of data from the third quarter 2017 and historic Site observations and monitoring results, recommendations for future activities include:

- Continue quarterly groundwater monitoring and sampling at the monitoring well locations illustrated on Figure 2.

BH07	5/8/2017	13.83			18.67	4,874.04	4,860.21	1.10
BH07	8/1/2017	9.37			18.73	4,874.04	4,864.67	4.46
Average change in groundwater elevation (5/8/2017 to 8/1/2017)								4.48

Notes:

1- Changes in groundwater elevation calculated by subtracting the measurement collected during the previous monitoring event from the measurement

amsl = feet above mean sea level

TOC = top of casing

Groundwater elevation = (TOC Elevation - Measured Depth to Water)

NM = Not Measured

NA = Not Applicable

TABLE 2
THIRD QUARTER 2017
SUMMARY OF BTEX CONCENTRATIONS IN GROUNDWATER
DCP CR 20 AND HWY 85 RELEASE
WELD COUNTY, COLORADO

Location Identification	Sample Date	Benzene (µg/L)	Toluene (µg/L)	Ethylbenzene (µg/L)	Total Xylenes (µg/L)	Comments
COGCC Standards (µg/L)		5	560	700	1,400	
BH01	8/1/2017	<1.0	<1.0	<1.0	<2.0	
BH02	8/1/2017	<1.0	<1.0	150	700	
BH03	8/1/2017	4.6	<1.0	97	1,300	
BH05	8/1/2017	<1.0	<1.0	<1.0	<2.0

BH07	8/1/2017	1.2	<1.0	17	210	

Notes:

1). The environmental cleanup standards for groundwater that are applicable to this site are the Colorado Oil and Gas Conservation Commission (COGCC) standards for contaminants in groundwater according to Table 910-1 of the COGCC 900 Series Rule for E&P Waste Management.

Bold red values indicate an exceedance of the COGCC groundwater standards for the Site.

NS = Not sampled.

µg/L = micrograms per liter.

LNAPL - Light non-aqueous phase liquid
