**General Comment:**

This is an environmental inspection to follow up on stats of Remediation 13683 which operator has requested closure of remediation.

Request for closure of remediation denied. Environmental inspection found stained soil still on location of spill. Operator shall remove stained soil from location and dispose of per Rule 907.b.(2) prior to requesting closure of remediation.

No attempt at surface reclamation has been made at the time of environmental inspection (COGCC Doc 700600034)

Operator shall conduct further soil testing after removal of impacted soils. Sampling should be compliant with COGCC Model Sampling and Analysis Plan (soils tested should be obtained from area with highest impact... i.e. areas with visually observable stained soil). 2-3 soil samples should be obtained for TPH-GRO, TPH-DRO and BTEX from visible disturbed remediation area. This inspector noted visible impacts in the top 3 inches of soil and samples should be obtained at this depth.
